

CHAMPAGNE

Champagne Salon 1971

THE VINTAGE

There was rapid emergence of vegetation, although spring frosts (between 27th and 29th April) affected 1000 hectares. The hailstorm of 27th May alone destroyed 650 hectares. Cold weather took hold in June, with flowering in very bad weather conditions, extending from June through to early July. Exceptional weather in July, but hail and windy weather from 27th July to 18th August completely annihilated 2650 hectares. Major erosion problems. Harvesting commenced on 18th September. Good quality.
